

EternaSeal™

An exceptional long lasting one-part elastomeric provides superior adhesion to a wide variety of surfaces. Fast dry with quick tack free time, permanently resilient, resists vibration and temperature cycling. Outstanding resistance to water, most industrial chemicals, acids/bases. Highly weather and UV resistant. No priming necessary, paintable, can be finger tooled.

SEALS

- Roof joints (seams)
- Flashings
- Copings
- Skylights
- Gutters

BONDS TO

- EPDM
- TPO
- Fiberglass
- Metals, including galvanized
- Glass

And more: wood, particleboard, plywood, brick, concrete

Available in: Clear, Black, White, and Gray

Ultimate All Purpose & Roof Repair Kit

Enhanced waterproofing and roof repair kit for the professional. Everything contained in a wide-opening shoulder tool bag.

KIT INCLUDES:

- 4" x 25' RoofSeal
- 2" x 50' DoubleStick
- 4" x 25' RoofSeal
- 14 oz Spray EternaPrime
- 14 oz Spray EternaClean
- HD 2.5" x 2# Roller
- Cutting Tool
- Scoring Pad
- Seam Probe

Custom Sizes

EternaBond® tapes are available in custom sizes. Please contact us for details or visit our website.

ETERNABOND®

Waterproof tapes for ROOF LEAK REPAIRS

Featuring
**MICROSEALANT®
TECHNOLOGY**

Durable and versatile for large commercial or quick emergency repairs.

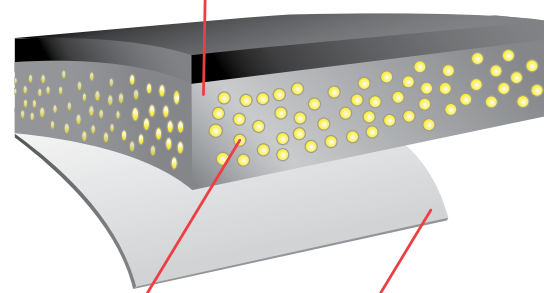

ETERNABOND®

Self Priming

Micropolymers
Removable Release Liner

RoofSeal™

For use on virtually all roofs, RoofSeal tape incorporates the advanced Eternabond® MicroSealant® Technology, and features a super flexible UV stable backing.

Available in white, black, tan and gray. RoofSeal™ is a one-step (with the exception of cleaning the surface), semi-permanent repair system for all roofs including EPDM, TPO, Hypalon and all roof accessories. RoofSeal creates a waterproof, moisture and air tight barrier.

RoofSeal PLUS®

RoofSeal PLUS, almost twice as thick as regular RoofSeal with 30 additional mils of Eternabond® MicroSealant® Technology! RoofSeal PLUS® is specifically designed for granulated roofs or surfaces that require a deeper seal.

DoubleStick™

For use between two surfaces, DoubleStick tape is a thick, 60 mil double-sided tape incorporating Eternabond® MicroSealant® Technology. DoubleStick creates a tight, permanently flexible, waterproof seal between two surfaces.

DoubleStick tape can be twisted into a rope and used to fill gaps and voids in wall penetrations. Great for pest control!

AlumiBond™

For use on roofs, walls, ductwork, floors, gravity tanks, troughs, etc. Heavy duty 4 mil aluminum backing for applications that need extra strength. UV stable and moisture tight. The aluminum backing, combined with a layer of Eternabond® MicroSealant® Technology, creates an extremely durable surface.

WebSeal®

WebSeal tape is a woven, reinforced fabric, coated with Eternabond® MicroSealant® Technology. WebSeal is designed to hold virtually all roof coatings whether water based or solvent based. WebSeal is a faster way to seal roofs prior to application of roof coatings.

WebSeal's "no memory" construction allows it to conform to many irregular surfaces like screw heads, standing seams, gutters, and more.

EternaClean™

EternaClean is a spray cleaner for all single-ply roof surfaces and is formulated with a proprietary mixture of hot solvents, designed to "open" single-ply roof membranes and metals. It allows the surface to release contaminants like oxidation, grime, oil & grease, tree sap, etc. EternaClean leaves no residue, dries fast, and is non-chlorinated so it is environmentally friendly.

EternaClean prepares surfaces for the application of EternaBond® tapes as well as other sealants.

EternaPrime™

EternaPrime is a specially formulated primer developed specifically for EternaBond® tapes.

EternaPrime is used to simplify installation and creates a stable surface when:

- Installing EternaBond® tapes in low ambient temperatures from +40°F down to -20°F
- As a coalescing agent on surfaces with difficult to remove dirt or rust
- Applying EternaBond® tapes to porous surfaces
- Conditions which may encapsulate the EternaBond® tape, such as mortar joints.

CAUTION: Do not use on PVC
