

# PAPER HONEYCOMB LEAN PROCESS

The woodworking industry needed a new **quality** adhesive.

The adhesive needed to have a shorter setting time...

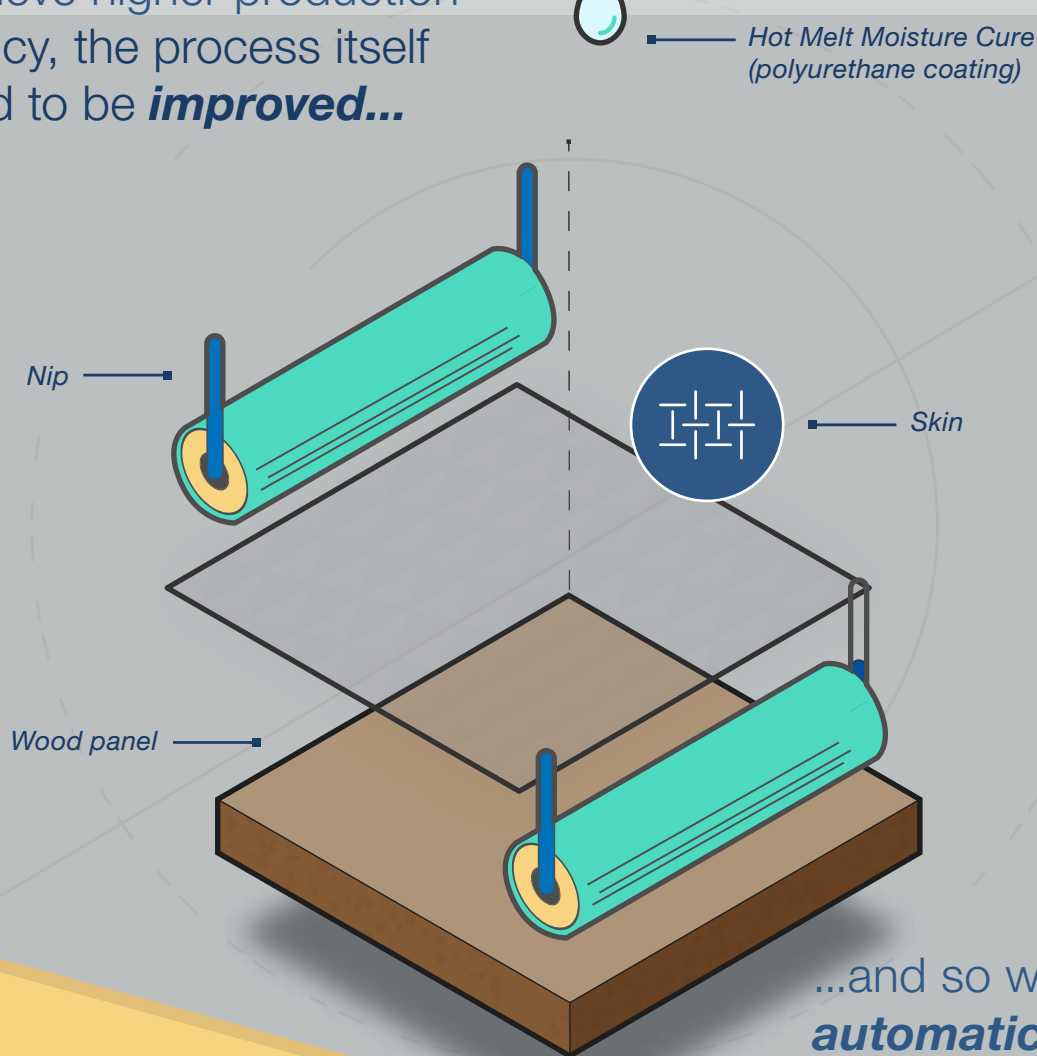

Quick setting

Better adhesion

and reduced production costs through higher efficiency, to improve adhesion quality.

To achieve higher production efficiency, the process itself needed to be **improved...**

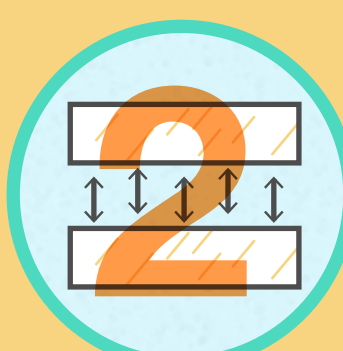

...and so we created an **automatic production** line.

Not only was this initiative geared towards **creating a valuable solution** for the industry,

Shorten setting time

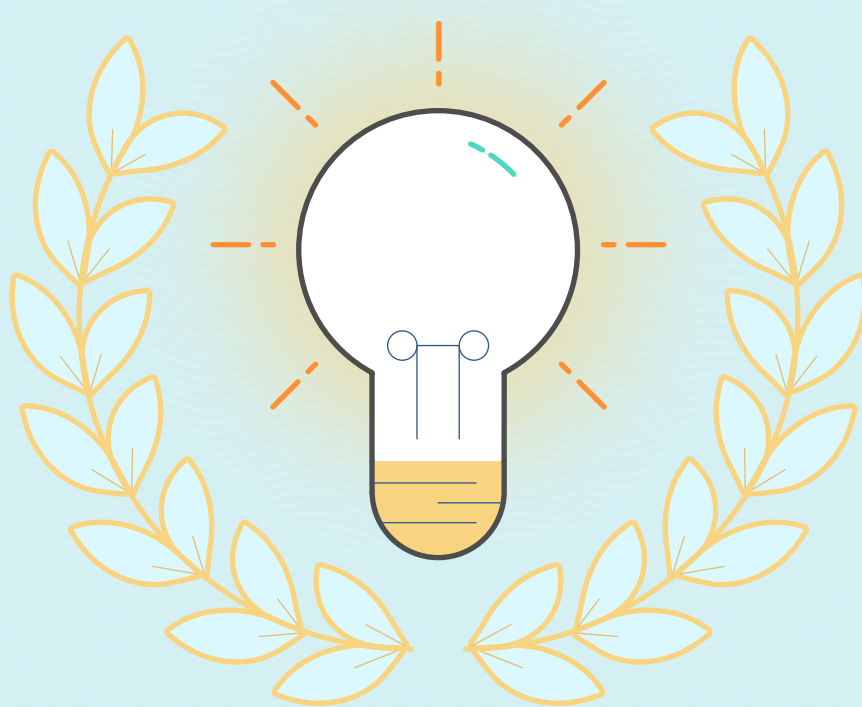

Better adhesion

Greater production line efficiency

...but a byproduct that would furthermore position H.B. Fuller as an **innovative competitor** in the market.

H.B. Fuller

Connecting what matters.™
